

How Important is the Licensed Electrician?

What is a Professional Electrician?

The electrical license is appointed to the electrical apprentice after years of training under a licensed electrician, after which the apprentice takes an exam to become a professional electrician. The professional electrician shall follow all state laws and board regulations.

What Does a Licensed Electrician Do?

Electricians do many things including ensuring safety, knowing the proper permit and inspection process, and preventing fires. Licensed electricians take on a variety of roles, including that of team player, problem solver, designer, and master. The ability to utilize these skills distinguishes the apprentice from the professional.

Once an electrician obtains an electrical license, a world of opportunity opens. An electrician can seek a union or non-union job. A licensed electrician can teach, get involved with sales, or become an Inspector of Wires. He or she can become a state investigator, company owner, State Board of Examiners of Electricians member, magazine editor, fire investigator, maintenance estimator, or MBTA employee, or a consultant. He can be UL or listing/labeling company employee. Moreover, a professional electrician may be a member or take a position office of a number of associations, including NFPA, IAEE, and the Manufacture Association. Electrical work is everywhere and with that license you can be employed almost everywhere, you name it.

The licensed electrician must always act professionally, even under the most challenging of situations. Unprofessional behavior may result in a state hearing. Consider that an electrical license is a privilege, one that can be revoked for misconduct.

Every electrical job in Massachusetts needs a licensed electrician, making the electrical licensed electrician one of the most important people in the industry. By keeping the ratio to 1:1, an electrician may stay employed for many years on job sites.

Licensed Electrician Wages

The wage for licensed electricians needs improvement. The rate of twenty-five dollars per hour has not changed much over the last forty years. This needs to be addressed. Both union and non-union electrical professionals should have increased wages.

Today, solar farms allow licensed electricians to be employed and make good wages, but there is still improvement to be had. With our industry changing all the time, our licensed electricians must keep up with the changes, which costs licensed electricians money, as well as electrical

customers who only want the newest information and products. It should be the professional electrician who are willing to work hard and know the industry well that are most valued.

Conclusion

We see many older licensed electricians trying to make a living after years of working in the trade. We wish them the best and hope they are paid for their years of hard work and dedication! If you see a licensed electrician, thank him or her for being a part of a growing industry in Massachusetts. You must stand strong as a licensed electrician in Massachusetts. You have wonderful state laws and regulations to protect you as an electrician.
